## TECHNICAL SKILLS

**Automation:** Playwright (TypeScript/Java) · Selenium WebDriver · TestNG · REST Assured · Postman · Appium · k6  
**Testing Types:** Manual · Functional · Regression · Smoke · Sanity · API · UI · Mobile · Performance & Load (JMeter · k6)  
**Protocols:** REST · gRPC · WebSocket · HTTP  
**Methodologies:** SDLC · STLC · Test case & scenario design · Requirement reviews · Defect lifecycle (Jira) · Agile / Scrum  
**Databases:** SQL · MySQL · Stored procedures · Triggers · Data validation · Schema testing  
**CI/CD & Tools:** Git · GitHub · Bitbucket · Jenkins · Docker · AWS (EC2, Lambda) · Linux/Unix CLI  
**Languages:** Java · JavaScript · TypeScript · SQL · Node.js · Express.js

## WORK EXPERIENCE

### SDET Oct 2025 – Present

BestQ Software Pvt. Ltd. · Remote, Kolkata

- Built multi-protocol performance testing capability, as measured by per-protocol Apdex and response-time reports under concurrent load, by developing a k6 + TypeScript framework that load-tests REST, gRPC, and WebSocket APIs, complemented by baseline load tests with Apache JMeter.
- Reduced UI regression cycle time by ~30%, as measured by sprint cycle reports, by building and maintaining a Playwright (TypeScript) automation framework that replaced repetitive manual test cases.
- Improved early defect detection, as measured by fewer escaped defects per release, by designing and executing manual functional, regression, smoke, and sanity test cases from product requirements and logging, tracking, and verifying defects in Jira.
- Strengthened API reliability, as measured by faster identification of contract failures, by validating REST request/response payloads, status codes, headers, and authentication flows using Postman and REST Assured.
- Improved data integrity across 3 services, as measured by zero post-deployment data defects, by authoring SQL stored procedures and assertion scripts to validate schema consistency and business logic.
- Supported stable continuous testing, as measured by consistent staging results, by integrating automated suites into Jenkins CI/CD pipelines with Docker-containerised execution and Git version control.

### SDET Intern Oct 2024 – Apr 2025

GoSky Tech Softwares Pvt. Ltd. · Onsite, Kolkata · Part-time alongside final-year studies

- Increased REST API test coverage by ~35%, as measured by the number of validated endpoints, by executing functional and edge-case scenarios with REST Assured and Postman across microservices.
- Contributed to release quality, as measured by defects caught before UAT, by writing and executing manual test cases and participating in requirement reviews across the SDLC and STLC.
- Reduced manual regression effort by ~40%, as measured by time per test cycle, by automating regression scripts and integrating them into Jenkins pipelines under Git version control.
- Validated data consistency in a legacy-to-microservices migration, as measured by row-level accuracy checks, by writing SQL queries and stored procedures to assert post-migration integrity.

## PROJECTS

### Multi-Protocol Performance Testing Framework — k6 · TypeScript · gRPC · WebSocket · REST · Node.js

- Built a protocol-agnostic k6 + TypeScript framework that load-tests REST, gRPC, and WebSocket APIs side by side from a single tool, with sequential, concurrent, and ramping load-test profiles composed from k6 scenarios and arrival-rate executors.
- Engineered cross-protocol data-consistency assertions — place an order over REST, verify it over gRPC, watch it over WebSocket — against a shared in-memory mock server, enforced via k6 thresholds so the suite fails CI on any inconsistency or non-zero error rate.
- Implemented distribution-based per-protocol Apdex, custom latency metrics, and trace-id failure logging, and automated a single-file, self-contained HTML report generated from each run's JSON summary for easy sharing.
- Set up the TypeScript build (Babel + webpack) that bundles each scenario for k6's goja runtime, a single Protobuf contract shared by client and mock server, and per-environment .env configuration (dev/staging/prod) for one-file environment switching.

### StudyNotion — EdTech Platform — JavaScript · React.js · Node.js · JWT Auth

- Developed a full-stack EdTech platform supporting 500+ enrollments; designed and executed test cases covering role-based access, payment workflows, and database-level assertions on user and transaction records.

## INITIATIVE & OWNERSHIP

- Took initiative to write and review SQL stored procedures, triggers, and assertion scripts, helping keep data consistent across migrations and deployments.
- Contributed to test coverage across UI (Playwright), API, performance (k6), and database layers, supporting more confident releases and fewer escaped defects.
- Coordinated with developers to triage, track, and verify bug fixes in Jira, helping reduce re-open rates and shorten resolution time.

## EDUCATION

### B.Tech in Electronics & Communication Engineering May 2022 – June 2025

Dr. Sudhir Chandra Sur Degree Engineering College, MAKAUT · Kolkata
