SUMMARY

SDET building UI, API and mobile test automation for web applications and microservices. Develops Playwright (TypeScript) and Selenium (Java/TestNG) suites with page objects, reusable fixtures and parallel runs; automates APIs with REST Assured, Postman/Newman and Karate; and runs everything in Jenkins CI/CD with failure triage that separates flaky tests from real defects. Security-minded (RBAC, encryption) and uses AI tools such as GitHub Copilot and Claude to speed up test creation and test data generation.

TECHNICAL SKILLS

Web, UI & Mobile: Playwright (TypeScript/Java) · Selenium WebDriver · TestNG · Page Object Model · Reusable fixtures · Parallel & cross-browser execution · Appium (mobile)

API Automation: REST Assured (Java) · Postman · Newman (CI integration) · Karate · Schema testing · Vitest

Testing Practice: Functional · Regression · Smoke · Sanity · Integration · End-to-end · Mobile · Negative & edge-case design · Flaky-test triage · Root-cause analysis · Performance & load (k6, JMeter)

CI/CD & Tools: Jenkins · Docker · AWS (EC2, Lambda) · Kubernetes · Git · GitHub · Bitbucket · Jira · Linux/Unix CLI

Languages & Data: Java · TypeScript · JavaScript · Node.js · SQL · PostgreSQL · MySQL · REST · gRPC · WebSocket

QA Process: SDLC · STLC · Test strategy & planning · Test case design · Defect lifecycle · Agile/Scrum

AI-Assisted Testing: GitHub Copilot · Claude · LLM API integration · AI-generated test data

WORK EXPERIENCE

Software Development Engineer in Test (SDET)

Oct 2025 – Present

BestQ Software Pvt. Ltd. · Remote, Kolkata

- Cut UI regression cycle time by ~30% by building a Playwright/TypeScript end-to-end suite for core product workflows with a page-object architecture, reusable fixtures and parallel cross-browser execution.
- Migrated UI automation from Selenium WebDriver (Java/TestNG) to Playwright with zero coverage lost by keeping the legacy suites running and extending them throughout the handover.
- Replaced manual API checks with repeatable REST Assured and Postman suites, executed via Newman, by validating request/response bodies, status codes, headers and authentication, and used Karate for API automation on an additional project.
- Extended test coverage from web and API to mobile by developing Appium tests for a mobile automation project.
- Put every build under automated test by integrating the UI and API suites into Jenkins CI/CD on Docker-containerised runners (AWS EC2) with developers, and kept results trustworthy by triaging failures to separate flaky tests and environment issues from real defects.
- Established capacity baselines for transaction-heavy backend services by designing distributed k6 load and spike tests on Kubernetes, then traced latency and throughput regressions to root cause with the development team.

SDET Intern

Oct 2024 – Apr 2025

GoSky Tech Softwares Pvt. Ltd. · Onsite, Kolkata

- Grew REST API coverage by ~35% across microservices by writing functional, negative and edge-case scenarios in REST Assured and Postman.
- Reduced manual regression effort by ~40% per cycle by automating UI regression with Selenium WebDriver (Java) and TestNG and wiring it into Jenkins.
- Made environment flakiness easy to separate from real product defects by running the suites against AWS EC2 test environments.
- Drove defects to verified closure in Jira across Agile sprints by contributing to test plans and writing functional, regression, smoke and sanity cases from requirements.

PROJECTS

BugSnap — One-Click Bug Capture with LLM-Written Tickets

LLM API · Chrome MV3 · Node · Express · TypeScript · PostgreSQL · React · Vitest

- Removed manual bug write-up from the reporting loop by integrating an LLM API that turns captured console errors, failed network calls, environment details and screenshots into labelled, severity-rated GitHub issues, with prompts tuned for consistent output structure.
- Verified access control and data protection with 17 Vitest backend tests covering the end-to-end HTTP flow and RBAC denial cases; tokens encrypted with AES-256-GCM and API keys stored as SHA-256 hashes.

Multi-Protocol Performance Testing Framework

k6 · TypeScript · REST · gRPC · WebSocket · Node.js

- Caught cross-protocol data mismatches before CI by building a protocol-agnostic k6/TypeScript framework with threshold-based consistency assertions, publishing per-protocol Apdex scores, trace-id failure logs and a self-contained HTML report for every run.

EDUCATION

B.Tech in Electronics & Communication Engineering

May 2022 – June 2025

Dr. Sudhir Chandra Sur Degree Engineering College, MAKAUT · Kolkata
