WORK EXPERIENCE

Software Development Engineer in Test (SDET) **Oct 2025 – Present**

BestQ Software Pvt. Ltd. · Remote, Kolkata

AI Hub — Intelligent Document Processing & AI Assistant Platform

Playwright · Node.js · Page Object Model · REST · AJV JSON Schema · Python (openpyxl) · Jenkins · GCP Secret Manager

API automation framework

- Built the API regression framework in Playwright for six inference services, reaching 98.6% endpoint coverage with AJV schema validation on every response.
- Automated the full async batch lifecycle (create, upload, start, poll, results, feedback, stop/resume) for five model families, along with webhook callback testing.
- Kept the suite stable under the server's rate limit with a shared rate limiter, fail-fast on auth errors and separate retry rules for 429 and 5xx responses.
- Added per-flow contract tests so a single schema failure no longer skips the tests after it, and moved test credentials into GCP Secret Manager.

UI automation framework

- Built and maintain the Playwright UI suite (Page Object Model) covering the full model lifecycle (train, deploy, infer, review, retrain) for four model types, plus tenant onboarding.
- Built an AI guardrail test harness that runs adversarial prompts across ten categories and tells platform blocks apart from model refusals, with parallel, resumable runs.
- Verified PII masking across 32 entity types using realistic synthetic test data.
- Reduced flakiness by waiting for network idle instead of fixed sleeps, locking each environment so parallel runs can't corrupt the shared tenant, and failing the build on silently skipped tests.

Test strategy & coverage

- Created the platform's QA baseline across 13 modules, and wrote a Python (openpyxl) pipeline that merges manual test cases from several workbooks into one coverage-gap dashboard with stable IDs.
- Found 60 defects through exploratory testing of the model lifecycle, including four model wizards that never checked for duplicate names.

Other work at BestQ

- Cut UI regression time by ~30% with a Playwright/TypeScript suite, and migrated the legacy Selenium (Java/TestNG) tests without losing coverage.
- Replaced manual API checks with REST Assured, Postman/Newman and Karate suites covering payloads, status and auth.
- Wrote PyTest suites and Appium mobile tests, and integrated the automation suites into Jenkins CI on Docker runners (AWS EC2).
- Ran distributed k6 load and spike tests on Kubernetes to set capacity baselines for transaction-heavy services.

SDET Intern **Oct 2024 – Apr 2025**

GoSky Tech Softwares Pvt. Ltd. · Onsite, Kolkata

- Increased REST API coverage by ~35% with functional, negative and edge-case tests in REST Assured and Postman.
- Automated UI regression with Selenium (Java) and TestNG on Jenkins, cutting manual regression by ~40% per cycle.
- Ran suites on AWS EC2 environments and tracked defects to closure in Jira across Agile sprints.

EDUCATION

B.Tech in Electronics & Communication Engineering (Lateral Entry) **2022 – 2025**

Dr. Sudhir Chandra Sur Degree Engineering College, MAKAUT · Kolkata

B.Sc. in Electronics **2019 – 2022**

Rishi Bankim Chandra College, WBSU · Kolkata

TECHNICAL SKILLS

Web, UI & Mobile: Playwright (JavaScript/TypeScript/Java) · Selenium WebDriver · TestNG · Page Object Model · Parallel & cross-browser runs · Appium
API Automation: REST Assured · Postman · Newman · Karate · AJV JSON-schema validation · Webhook & callback testing
Testing Practice: Functional · Regression · Integration · End-to-end · Exploratory · Negative & edge-case design · Flaky-test triage · Root-cause analysis · AI guardrail & PII testing · Performance & load (k6, JMeter)
CI/CD & Cloud: Jenkins · Docker · Kubernetes · AWS (EC2, Lambda) · GCP Secret Manager · Git · Bitbucket · Jira · Linux
Languages & Data: Java · JavaScript · TypeScript · Python (PyTest, openpyxl) · Node.js · PostgreSQL · MySQL · REST
QA Process & AI: SDLC · STLC · Test strategy · Coverage dashboards · Agile/Scrum · GitHub Copilot · Claude · LLM APIs

PROJECTS

BugSnap — One-Click Bug Capture with LLM-Written Tickets *(LLM API, TypeScript, Node, React, Vitest)*

- Chrome extension that captures console errors, failed network calls and a screenshot, then has an LLM file a severity-rated GitHub issue. 17 Vitest tests cover the HTTP flow and RBAC denials, with AES-256-GCM token encryption.

Multi-Protocol Performance Testing Framework *(k6, TypeScript, REST, gRPC, WebSocket)*

- Load-tests REST, gRPC and WebSocket services from one framework, with threshold checks that catch cross-protocol data mismatches before CI. Each run produces per-protocol Apdex scores and an HTML report.
